

MigmaGolf™

for Improving Safety and Reducing Golf Ball Injuries

According to Golf Digest, some 40,000 golfers visit emergency rooms each year after being injured on the course. This usually occurs due to wayward golf balls and dislodged club heads (a terrifying feeling if you've ever experienced it). Though rare, golf course accidents have unfortunately even been fatal. This may also happen to a passerby, spectator, or neighbor of the golf course.

MigmaGolf™ can help reduce unnecessary golf ball injuries. Using solar-powered pushbuttons and flashing beacons, golfers can press the button to actuate the warning light, thus, informing people nearby for potential golf ball injuries.

Price

MigmaGolf - Wireless Beacon	\$1,145
MigmaGolf - Wireless Button	\$275
